

**Project URL:**

<https://recipe-omis120-yueqisu.c9users.io/>

Note: URL working only when project is running on my end

**Project Descriptions:**

Master Chief is a website for recipe searching and sharing, designed for recipe lovers and food enthusiasts. Comparing to other recipe websites online, which is overload with unnecessary information and ads, Master Chief is very user friendly and easy to navigate, with the general goal of making the process of finding the right recipe and accessing information easy and enjoyable.

Master Chief's current main functionalities include

- Recipe search/filter bar which allows all users to search and view any recipe
- Account feature which allows all registered users to save recipes to their own account for quick access
- Javascript timer on all recipe instruction page which makes it easier to follow time-based instructions (ie. bake for 40 minutes)

Some potential features to be added may include

- Recipe rating/review system (rated and reviewed by registered users)
- User-upload customized recipes
- Account management (such as change of password/email)

**Recipe Sites on the Web:**

- <http://allrecipes.com/>
- <https://www.epicurious.com/>

**Sources:**

- Website created using bootstrap
- Website template is inspired by Bootstrap free template "Agency" theme
- Navigation bar and contact form html/css code taken from "Agency"
- Login popup modal html/css code taken from w3school
- All images are found on <https://www.pexels.com/> and free for personal and commercial use
